This book explores the mobilisation of China’s wind and solar industries and examines the benefits and disadvantages of this development to energy production, innovation and governance. It sheds new light on the strategic development of China’s renewable energy industry, the flexible governance methods employed, and the internal struggles that Chinese local and central policymakers, state-owned enterprises and academia have faced. This book will be of great relevance to students and scholars of renewable energy technologies, energy policy and sustainability transitions, as well as policymakers with a specific interest in China.

Marius Korsnes is a postdoctoral researcher connected to the Research Centre on Zero Emission Neighbourhoods in Smart Cities (ZEN) and the Norwegian Centre for Energy Transition Strategies (NTRANS) at the Norwegian University of Science and Technology, Norway.
